Letter of recommendation for Panagiotis Evangeliou

To Whom It May Concern:

Panagiotis Evangeliou joined my team in March 2021 and within a few months he grew quickly into his role as web developer. He launched himself into his new functions with enthusiasm and a tireless appetite for work, quickly picking up new skills and demonstrating a broad range of technical competencies and programming skills in web technologies. He is collaborative and consultive and he makes the extra effort to do things in a way that could scale and would require less maintenance in the future. His main functions within the web team are:

- Develop the back-end and front-end of “MyCERN” application, which is used by CERN community. The application makes use of different CERN REST Services and is built using Django, ReactJS, GitLabCI and OpenShift;
- Maintain CERN’s public website (<https://home.cern>);
- Maintain CERN’s custom Drupal themes and modules (PHP, Twig, JS and CSS) and develop new ones according to the organization’s needs;
- Engage with and support CERN’s Drupal community.

As well as having strong technical competencies and programming skills, Panagiotis is quick to develop good working relationships at many levels of seniority within the Organization. He has an amicable nature, a natural willingness to provide quick and reliable technical help; he is highly motivated and takes responsibility for his tasks and actions.

I love to work with Panagiotis and I have no hesitation in recommending him for a technical role in software engineering.

Yours sincerely,

A handwritten signature in black ink, appearing to be "Sotirios Boutas", with a stylized flourish at the end.

Dr. Sotirios Boutas
Web Manager
Education, Communications and Outreach
